

UNIVERSAL MINER PRO

Codebase Consolidation Report

Generated: June 07, 2026 10:20 UTC

1. Objective

The goal of this operation was to audit, compare, and consolidate all versions of the Universal Miner Pro codebase spread across 13 uploaded ZIP archives into a single, clean, version-consistent package — reduced from 30+ scattered files down to exactly **5 consolidated files**, one per file type.

2. Input Archives Analyzed

Archive Name	Size	Files	Generation
Universal_Miner_Pro-Android_Addition.zip	82 KB	17	v1 — Android (earliest)
Universal_Miner_Pro-Android_Addition-1.zip	43 KB	16	v1 — Android
Universal_Miner_Pro-Android_Addition-2.zip	75 KB	17	v1 — Android
Universal_Miner_Pro-6Coin_CPU.zip	121 KB	16	v2 — 6-Coin CPU
Universal_Miner_Pro_ULTIMATE_v4_0.zip	48 KB	17	v4.0 — Ultimate
Universal_Miner_Pro_ULTIMATE_v4_1_EXTENDED.zip	57 KB	17	v4.1 — Extended
UMP_UNIVERSAL_v4_2_EXTENDED-1.zip	85 KB	22	v4.2 — Universal Extended
UMP_UNIVERSAL_v4_2_COMPLETE-1.zip	90 KB	29	v4.2 — Universal Complete
UMP_ULTIMATE_v4_0_COMPLETE.zip	132 KB	33	v4.0 — Ultimate Complete
UMP_MERGED_FINAL_v4.zip	137 KB	36	v4 — Merged Final
UMP_MERGED_FINAL_v4_WALLET_ENFORCED.zip	142 KB	37	v4 — Wallet Enforced
UNIVERSAL-CRYPTO-MINER-main.zip	143 KB	4	v4 — GitHub Release
UMPV5_2.zip	152 KB	38	v5.2 — LATEST

* UMPV5_2.zip (highlighted green) was used as the primary authoritative source. For any file where a newer or larger version existed in another archive, that version was selected instead.

3. Version Evolution

Across all archives, the codebase evolved through 6 distinct generations. Each generation added significant new modules and expanded existing ones:

Generation	Key Additions	Approx. File Count
v1 — Android Addition	Core miner: universal_miner, miner_config, miner_swarm, dashboard	12–17
v2 — 6Coin CPU	Expanded miner_config, larger miner_swarm, setup.html added	16
v4.0 — Ultimate	ump_hardware_detect, ump_miner_registry, ump_profit_switcher added	17
v4.1 — Extended	install_universal_miner.sh expanded, miner_swarm upgraded	17
v4.2 — Universal	ump_universal_installer, wallet_core, wallet_api, wallet_db added	22–29
v4 — Merged Final	wallet_validator, gunicorn_config, wsgi.py, wallet_ui.html added	36–37
v5.2 — LATEST	wallet_enforcer, wallet_core expanded to 57KB, all modules refined	38

4. Consolidation Methodology

For every file that appeared in multiple archives, the following selection rule was applied:

Rule: Select the version with the greatest byte size (indicating most features/code), using the most recent date as a tiebreaker. This ensures no functionality is lost.

Key per-file sourcing decisions:

File	Winning Version	Size	Why Selected
wallet_core.py	UMPV5.2	57,094 B	Largest by far — 20KB more than v4
miner_config.py	UMPV5.2 / WALLET_ENFORCED	42,823 B	Tied largest; v5.2 used
universal_miner.py	UMP_ULTIMATE_v4_0_COMPLETE	35,919 B	Largest — nearly 2x v5.2
wallet_ui.html	UMPV5.2	62,028 B	Largest HTML template
dashboard.html	UMP_ULTIMATE_v4_0_COMPLETE	34,994 B	Slightly larger than v5.2
install_universal_miner.sh	ULTIMATE_v4_1_EXTENDED	21,544 B	Largest installer script
install_ump_universal.sh	UMP_MERGED_FINAL_v4	23,582 B	Largest secondary installer
install_miner.sh	Android_Addition-1	6,666 B	Unique — only in Android version
wallet_enforcer.py	UMPV5.2	12,565 B	Only in v5.2 and WALLET_ENFORCED
USER_GUIDE.md	Android Addition	13,222 B	Larger (Android version more detailed)

5. The 5 Consolidated Output Files

all_python.py		368,120 B 9,412 lines 15 Python modules
Contains:	wsgi.py • gunicorn_config.py • universal_miner.py • miner_config.py • miner_manager.py • miner_swarm.py • ump_hardware_detect.py • ump_miner_registry.py • ump_profit_switcher.py • ump_universal_installer.py • wallet_core.py • wallet_api.py • wallet_db.py • wallet_validator.py • wallet_enforcer.py	
Delimiters:	Modules separated by # ===== / # MODULE: filename / # ===== headers	
all_shell.sh		62,507 B 1,645 lines 8 Shell scripts
Contains:	install_universal_miner.sh • install_ump_universal.sh • install_miner.sh • start.sh • stop.sh • restart.sh • start_gunicorn.sh • start_screen.sh	
Delimiters:	Scripts separated by # ===== / # SCRIPT: filename / # ===== headers	
all_docs.md		37,293 B 1,252 lines 3 Markdown documents

Contains:	README.md (v5.2) • USER_GUIDE.md (Android — most complete) • Upstream README (UNIVERSAL-CRYPTO-MINER)
Delimiters:	Documents separated by --- dividers and # heading blocks

all_text.txt 3,839 B 96 lines 6 Text files	
Contains:	requirements.txt • README.txt • README_bins.txt • bin/README.txt • logs/README.txt • LICENSE
Delimiters:	Sections separated by --- filename --- labels

all_html.html 148,817 B 2,950 lines 4 HTML templates	
Contains:	dashboard.html • setup.html • profiles.html • wallet_ui.html
Delimiters:	Each template wrapped in ... blocks

6. Bug Found and Fixed

During consolidation, a syntax error was discovered in `install_universal_miner.sh` (present in the `ULTIMATE_v4_1_EXTENDED` version — the largest installer). A multi-command `echo -e` statement had its line incorrectly merged, causing `bash` to reject the entire script.

Broken (original):

```
echo -e " XMRig : $([ -f "$BIN_DIR/xmrig" ] && echo "READY" || echo "MISSING"\n echo -e "
cpuminer : $([ -f \"$BIN_DIR/cpuminer-multi\" ] && echo \"READY\" || echo \"NOT BUILT\"))"
```

Fixed (patched):

```
echo -e " XMRig : $([ -f "$BIN_DIR/xmrig" ] && echo "READY" || echo "MISSING")" echo -e "
cpuminer : $([ -f "$BIN_DIR/cpuminer-multi" ] && echo "READY" || echo "NOT BUILT")"
```

The fix splits the merged line back into two separate `echo` calls and corrects the escaped quotes. All shell scripts passed `bash -n` (dry-run syntax check) after the fix.

7. Final Package Statistics

Metric	Before	After
Number of ZIP archives	13	1
Total files inside ZIPs	30+ (with duplicates)	5
Unique file types handled	—	5 (.py, .sh, .md, .txt, .html)
Python modules	15 (scattered)	15 (unified in all_python.py)
Shell scripts	8 (scattered)	8 (unified in all_shell.sh)
Markdown documents	3 (scattered)	3 (unified in all_docs.md)
Text files	6 (scattered)	6 (unified in all_text.txt)
HTML templates	4 (scattered)	4 (unified in all_html.html)
Final ZIP size	~1.2 MB total	137 KB
Shell syntax errors	1 (in installer)	0 (patched)
Duplicate/stale files eliminated	0	25+
